

## Lesson 3 Demo 10

### External Styling

**Objective:** To develop an HTML file using external styling.

**Tools required:** Ubuntu Linux VM

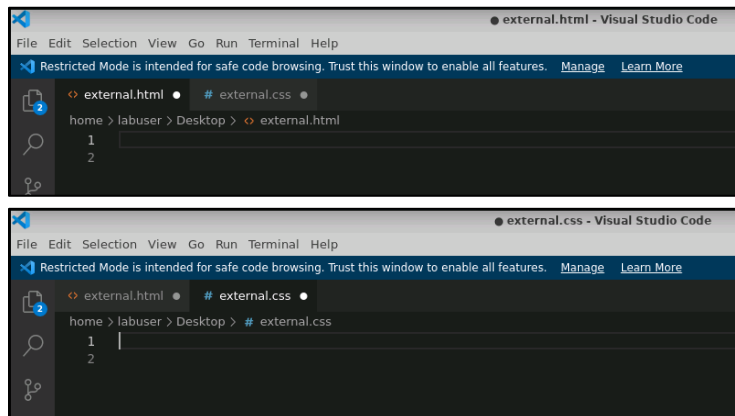

**Prerequisites:** Visual Studio Code

Steps to be followed:

1. Create a file with a .html and .css extension
2. Create and save code for external styling
3. The expected outcome

#### Step 1: Create a file with a .html and .css extension

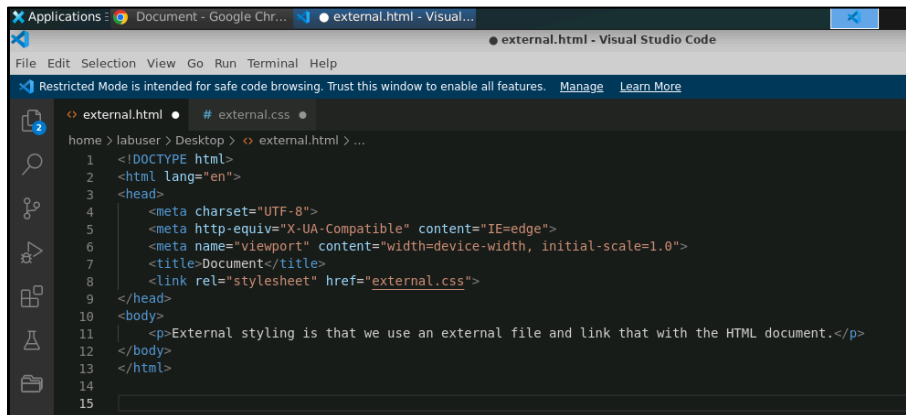

##### 1.1 Create the file named **external.html** and **external.css**

#### Step 2: Create and save code for external styling

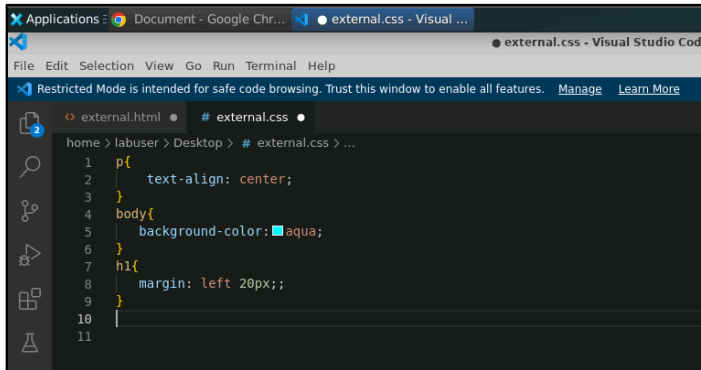

2.1 Enter the below code in the **external.html** file:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Document</title>
  <link rel="stylesheet" href="external.css">
</head>
<body>
  <p>External styling is that we use an external file and link that with the HTML
document.</p>
</body>
</html>
```

2.2 Enter the below code in the **external.css** file:

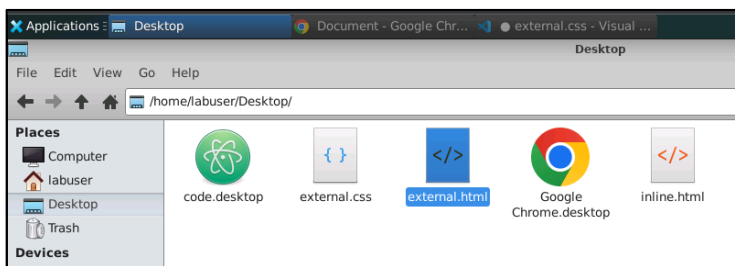

```
p{
  text-align: center;
}
body{
  background-color:aqua;
}
h1{
  margin: left 20px;;
```

2.3 Save the code.

## Step 3: The expected outcome

3.1 In **Desktop**, select the **external.html** file

3.2 Right-click on the external.html file and click on the **Open with “Google Chrome”** option. You will see the output as shown below:
