

Lesson 05 Demo 03

Implementing Maps and Classes

Objective: To implement maps and classes

Tools required: : Visual Studio Code

Prerequisites: NA

Steps to be followed:

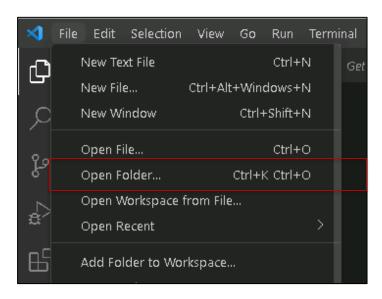

1. Writing a JavaScript program for maps and classes

2. Executing and verifying the working of maps and classes

Step 1: Writing a JavaScript program for maps and classes

Note: Create a folder named **src** folder for the project.

1.1 Open Visual Studio Code and Right click on the **File** menu of the code editor and select **Open Folder**:

1.2 Right click on the **src** folder of the project, select **New File** option and enter the filename as **index.html** and write the code shown below in the **index.html**:

```
<html>
    <body>
        <h1>MEAN Stack</h1>
        Maps and classes Demo 
        <script src="maps_and_classes.js"></script>
        </body>
</html>
```

```

| Composed Certs S
```

1.3 Right click on the **src** folder of the project and select **New File** option and enter the filename as **maps_and_classes.js** and write the code shown below:

```
var map1 = new Map();
map1.set("first name", "Robb");
map1.set("last name", "Stark");
map1.set("friend 1","Bran")
    .set("friend 2","Arya");
console.log(map1);
console.log("map1 has friend 3 ? " + map1.has("friend 3"));
console.log("get value for key = friend 3 - "+ map1.get("friend 3"));
console.log("delete element with key = friend 2 - " + map1.delete("friend 2"));
map1.clear();
console.log(map1);
class Employee
{
    constructor(id,name)
```

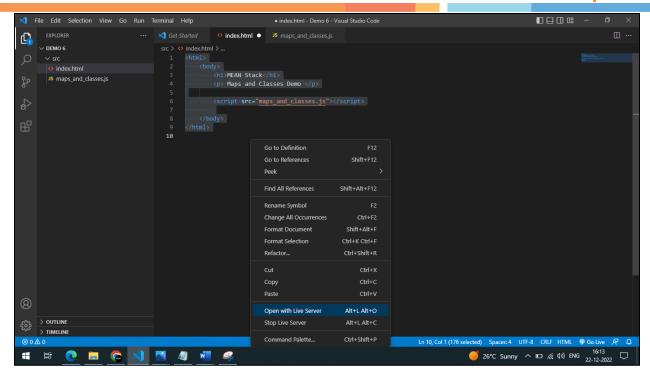

```
{
    this.id=id;
    this.name=name;
}
    detail()
{
    document.writeIn(this.id+" "+this.name+"<br>")
}
//passing object to a variable
var e1=new Employee(101,"Michael");
var e2=new Employee(102,"Bob");
e1.detail();
e2.detail();
```

1.4 Save the files.

Step 2: Executing and verifying the working of maps and classes:

2.1 Right click on the index.html file of the project and select Open with Live Server

2.2 Right-click when the server starts running. Select *Inspect Element* option. Click on *Console* tab.
