

Lesson 04 Demo 03

Implementing Route Parameters in a React Application

Objective: To demonstrate the implementation of route parameters in a React application using React Router and components for enhanced navigation and dynamic content

Tools required: Visual Studio Code and Node.js

Prerequisites: A basic understanding of routes parameters in React

Steps to be followed:

1. Set up a new React app

2. Install React Router

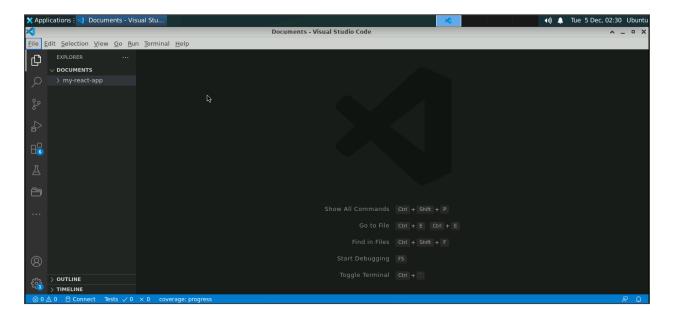

3. Create component files

4. Create routes with parameters

5. Run the application

Step 1: Set up a new React app

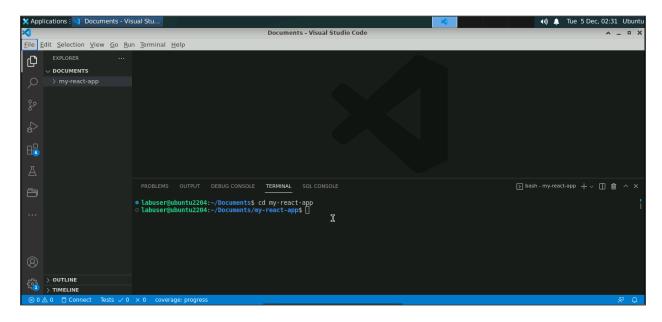

1.1 Open Visual Studio Code and create a new folder named my-react-app

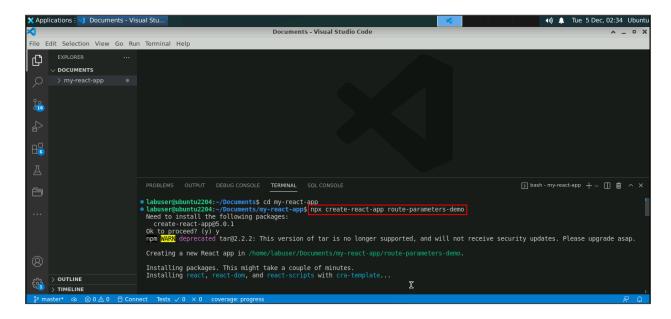

1.2 Open the terminal and navigate to the **my-react-app** folder using the following command:

cd my-react-app

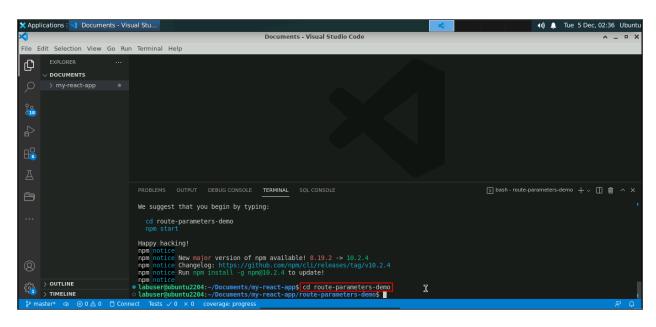

1.3 Initialize a new React app using the following command: npx create-react-app route-parameters-demo

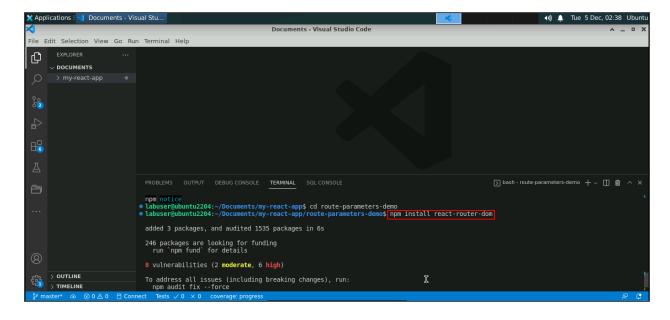

1.4 Navigate to the **route-parameters-demo** folder using the following command: **cd route-parameters-demo**

Step 2: Install React Router

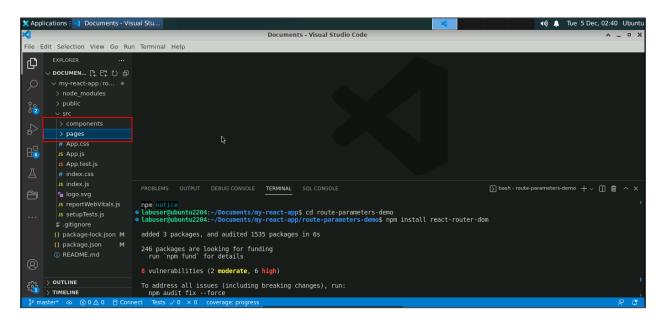

2.1 Install the React router using the following command: **npm install react-router-dom**

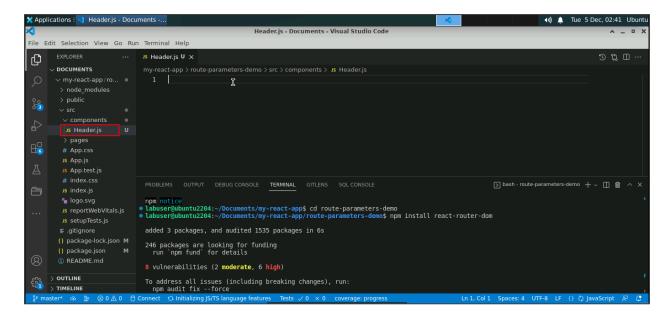

Step 3: Create component files

3.1 In the src folder, create two new folders named components and pages

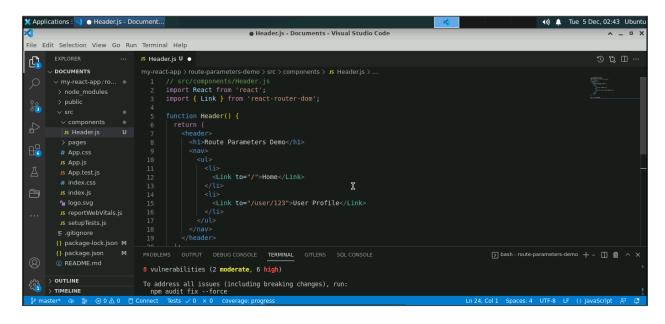

3.2 Inside the components folder, create a new JavaScript file named Header.js

3.3 Add the following code to the **Header.js** file: // src/components/Header.js import React from 'react'; import { Link } from 'react-router-dom'; function Header() { return (<header> <h1>Route Parameters Demo</h1> <nav> ul> <Link to="/">Home</Link> <Link to="/user/123">User Profile</Link> </nav> </header>); }

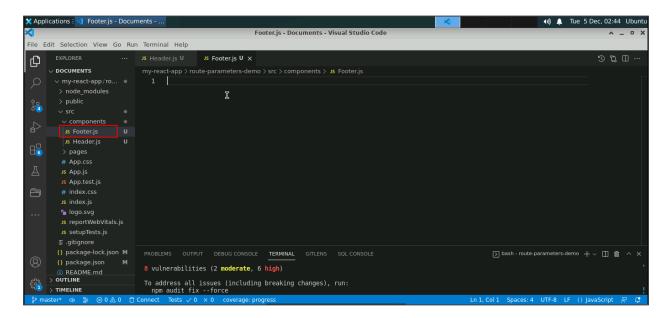

export default Header;

Note: Save the file.

3.4 Inside the components folder, create a new JavaScript file named Footer.js

3.5 Add the following code to the Footer.js file:

```
// src/components/Footer.js
import React from 'react';

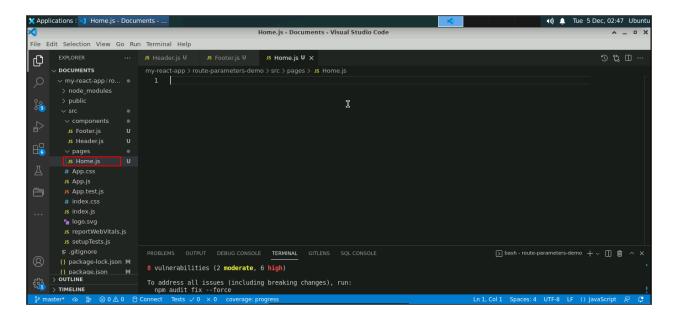

function Footer() {
  return (
      <footer>
      © 2023 Route Parameters Demo
      </footer>
    );
}

export default Footer;
```

```

                              To address all issues (including breaking changes), run: npm audit fix --force
```

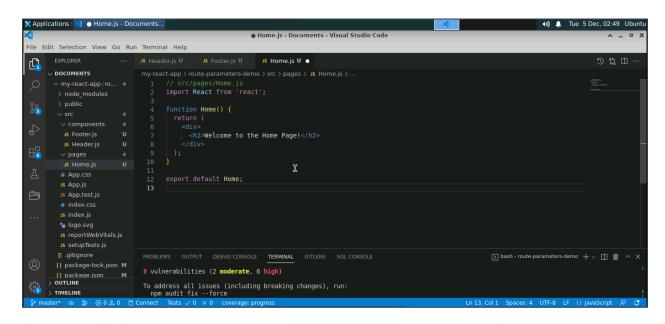

3.6 Inside the pages folder, create a new JavaScript file named Home.js

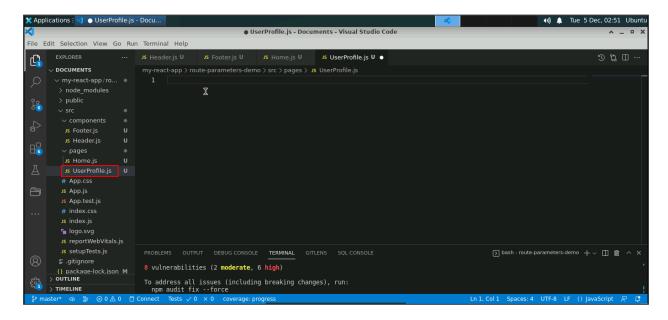

3.7 Add the following code to the **Home.js** file:

export default Home;

3.8 Inside the pages folder, create a new JavaScript file named UserProfile.js

```
**Applications of a UserProfile.js - Documents - Visual Studio Code

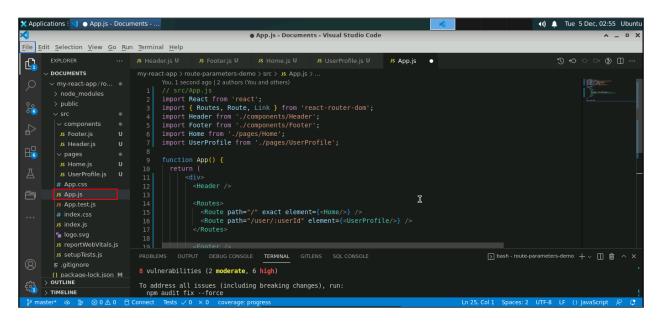

| Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | Second Code | S
```

Step 4: Create routes with parameters

```
4.1 Replace the existing code in the App. is file with the following code:
   // src/App.js
   import React from 'react';
   import { Routes, Route, Link } from 'react-router-dom';
   import Header from './components/Header';
   import Footer from './components/Footer';
   import Home from './pages/Home';
   import UserProfile from './pages/UserProfile';
   function App() {
    return (
      <div>
       <Header />
       <Routes>
        <Route path="/" exact element={<Home/>} />
        <Route path="/user/:userId" element={<UserProfile/>} />
       </Routes>
       <Footer />
      </div>
    );
```

export default App;

4.2 Replace the existing code in the **index.js** file with the following code: import React from 'react'; import ReactDOM from 'react-dom/client'; import './index.css'; import App from './App'; import reportWebVitals from './reportWebVitals'; import {BrowserRouter} from 'react-router-dom' const root = ReactDOM.createRoot(document.getElementById('root')); root.render(<BrowserRouter> <React.StrictMode> <App /> </React.StrictMode> </ BrowserRouter>); // If you want to start measuring performance in your app, pass a function // to log results (for example: reportWebVitals(console.log)) // or send to an analytics endpoint. Learn more: https://bit.ly/CRA-vitals reportWebVitals();

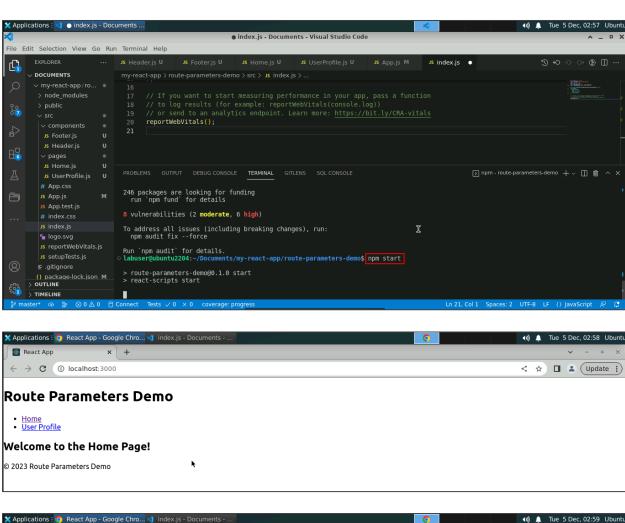

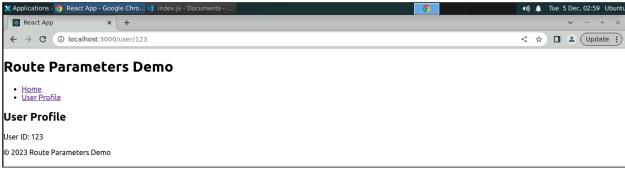

Note: Save all the files.

Step 5: Run the application

5.1 Start the React development server using the following command: **npm start**

By following these steps, you have successfully set up a React application with route parameters to facilitate dynamic content and improved navigation using React Router and components.
