Lesson 3 Demo 9

Inline styles

**Objective:** To develop the HTML file with inline styles

Tools required: Ubuntu Linux VM
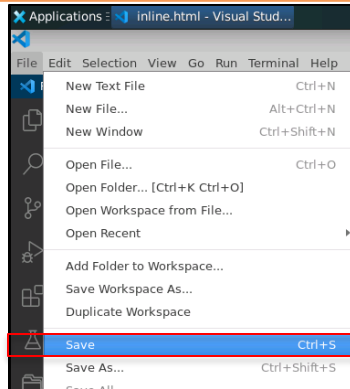

Prerequisites: Visual Studio Code

Steps to be followed:

1. On the HTML folder, create a file with a .html extension
2. Create and save a code for inline styling
3. The expected outcome

**Step 1: On the HTML folder, create a file with a .html extension**

1.1 Save the file name as an **inline.html**

Step 2: Create and save a code for inline styling

2.1 Enter the below code:

```html
<!DOCTYPE html>
<html>
  <head>
    <title>Playing with Inline Styles</title>
  </head>
  <body style="background-color:rgb(39, 39, 38);">
    <p style="color:rgb(15, 173, 235);font-size:40px;text-align:center;">
      This is known as <strong>Inline Styling.</strong><br> <strong>Simplilearn</strong> is the <strong>world's #1 online Bootcamp provider</strong>,
      enabling learners across the globe with rigorous and highly specialized training offered in partnership
      with world-renowned universities and leading corporations.
  </body>
</html>
```

2.2 Save the code.

Step 3: The expected outcome

3.1 Open the file with **Google Chrome.** You will the output as shown below:
